

EXPERIMENT – 13

Study about Wireshark

Objective

To install Wireshark, complete the required packet-capture components, open the application, create a packet capture, and save the capture file.

Software: Wireshark (Windows)

The installation screenshots included in this document show the Windows installer flow.

Installation – Step-by-Step Procedure

1. **Welcome:** Open the Wireshark installer and proceed from the welcome screen.
2. **License / acknowledgement:** Review and accept the licence/acknowledgement to continue.
3. **Choose Components:** Keep the required Wireshark components selected and continue.
4. **Additional Tasks:** Select the required additional tasks and proceed.
5. **Install Location:** Select the installation directory and continue.
6. **Npcap / Packet Capture:** Install/enable Npcap so Wireshark can capture packets.
7. **Optional USB Capture:** If required, enable the optional USB capture support.
8. **Installation Progress:** Wait for the installer to copy and configure the files.
9. **Installation Complete:** Finish the installer after the installation completes.

The next nine pages contain the installation screens supplied in the original PDF.

Open Wireshark and Create a New Capture

Step 1 – Open Wireshark

Launch Wireshark from the Windows Start menu or desktop shortcut.

Step 2 – Select a network interface

On the Wireshark start screen, choose an active network interface.

Step 3 – Start a new capture

Double-click the selected interface, or use the capture start control, to begin a new packet capture.

Step 4 – Observe packets

Allow the capture to run briefly. Packets will appear in the packet list as traffic is captured.

Step 5 – Stop the capture

Use the Stop control to end the capture.

Save the Capture File

Step 6 – Save the capture

Use **File** → **Save As** and choose a suitable folder and filename.

Step 7 – Choose the capture-file format

Save the captured packets as a Wireshark capture file, commonly using the **.pcapng** format.

Step 8 – Verify the saved file

Confirm that the capture file is present in the selected folder and can be opened again in Wireshark.

Process	Status
Wireshark installed	✓
Wireshark opened	✓
New packet capture created	✓
Capture stopped	✓
Capture file saved	✓

Result

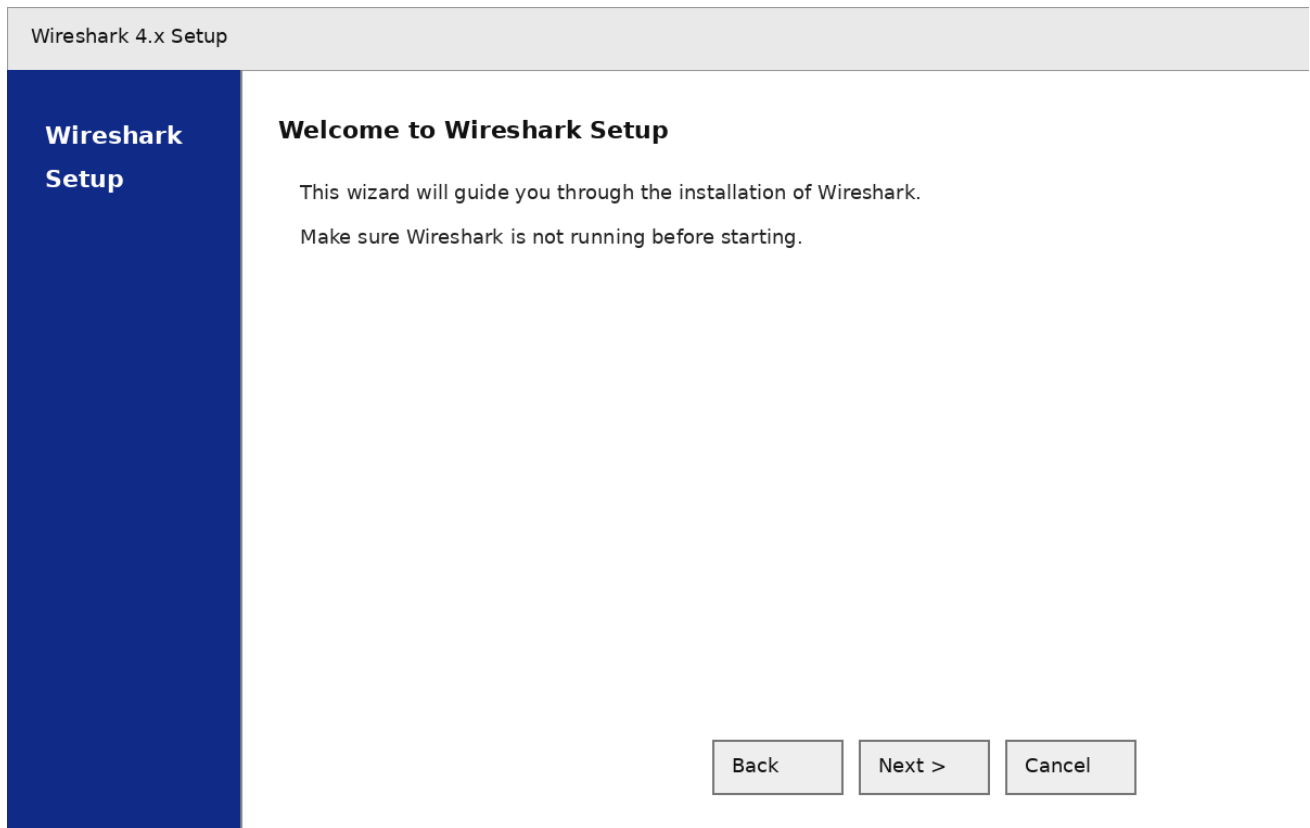

“Wireshark configuration installed successfully.”

Wireshark Installation Process

Windows — step-by-step screens

Important: The screens below are representative illustrations of the Windows installer flow. The exact wording, buttons, and layout can change between Wireshark versions. The official Wireshark documentation confirms the main installation stages: components, additional tasks, install location, and Npcap.

1. Welcome

2. License / acknowledgement

Wireshark 4.x Setup

Wireshark Setup

License Agreement

Please review the license terms before installing Wireshark.

Scroll through the agreement and select the acknowledgement/acceptance option to continue.
